THE TIME IS NOW...

IOT Services to Aid
OEMs Reap Maximum
Benefits by Making More
Things Connected.

Internet of Things to Lead the Era of Digitization

Powersoft19 understands that with the onset of Industry 4.0, the application of the latest digital information technologies to industrial activities has grown, forcing organizations to redevelop their approach towards the Internet of Things (IoT). We use latest and advanced digital information technologies to help enterprises reduce capital cost, increase speed of delivery, and gain access to an increased market share. This is the time for OEMs to take full advantage of the fact that only 10 billion things out of the 1.5 trillion that exist globally are connected. OEMs require IoT Frameworks and IoT consultancy services to reap benefits from this mega disruption and by making more things "connected".

Our IoT services enable conglomerates to extract value from Big Data, Advanced Robotics, and Artificial Intelligence to access top-notch IoT capabilities ensuring business continuity despite major disruptions.

Our Services

- HMI UI & UX Design
- Safety-Critical Embedded
- End to End DevOps
- Device Synchronization
- Automotive IoT
- Real-Time Data Analytics
- IoT for RFID devices
- IoT Machine Learning
- IoT Big Data
- IoT Enterprise Integration
- End-to-end Cyber Security
- Apps Development (native, hybrid)
- OTA Update
- Product Prototyping

Why Powersoft19 ?

- 20+ years of experience in numerous IoT services
- Life Capability Management is a part of IoT framework
- Seamless user experience for software and apps capabilities
- Confidentiality, security, and IP protection guaranteed
- Single coding standard is used
- E2E services model (hardware, firmware, connectivity, data gathering and processing, consultancy).

6 Trillion

Investment in IoT devices by 2020.

13 Trillion

Return on investments by 2025

Consumers

will prospectively own 5 Billion IoT devices by 2020. Additionally, they will also have spent \$900 Million on them.

Governments

will own 7.7 Billion IoT devices by 2020. Additionally, they will also have spent \$2.1 Billion on them.

Businesses

will own 11.2 Billion IoT devices by 2020. Additionally, they will also have spent \$3 Billion on them.
